Autumn Chanterelles

What Are Autumn Chanterelles?
Autumn chanterelles are in the “Cantharellus” family of mushrooms and can be found everywhere from Western Europe to Asia. They are particularly plentiful in the Pacific Northwest and nearby Canada, as well as in the northeastern United States. They have a rich, nutty, faintly sweet flavor with a solid meaty texture. You can easily recognize them by their wavy, fleshy caps with ruffled surfaces that flare upward along the stem, forming an abstract tulip.

European and Asian forms are usually about the size of a thumb. In the eastern United States they may be the size of a fist; on the West Coast they can grow as large as two hand spans. It is not rare to find chanterelles weighing as much as two pounds.
